DETAILED ACTION

Claim Objections

1. Claims 4-18 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from any other multiple dependent claims. See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Durham (4030626).

4. As concerns claims 1 and 3, Durham shows a working tool for an earth-moving machine having a digging device (B) embodied as a scoop or bucket which is arranged so as to be pivotable on an arm (A) of the earth-moving machine and delimits a receiving space for the material to be excavated, and having an add-on device (26 and 28) which is arranged on the digging device and can be detached from the arm as a modular unit with said digging device, which add-on device has an auxiliary tool (36) which can be pivoted relative to the loading opening of the receiving space by means of a pivoting drive (48), characterized in that the pivoting drive has a pivoting shaft (24), which is arranged above the loading opening and extends over more than half of the

width thereof, for a limited pivoting movement, and in that the auxiliary tool can be fixed to the pivoting shaft by connecting means (32) so as to be exchangeable and/or moveable in terms of position; and which the pivoting shaft extends over the entire width of the loading opening.

5. As concerns claim 2, Durham shows wherein the pivoting shaft (24) runs parallel to and at a distance from the arm pin provided on the arm for a pivoting movement of the digging device.
